Ok this is a big game, especially for RoTK fans like me, but I'm facing some problems and after I conquer a rival city, I can't see to be able to get into the city structure and buy more soldiers, Ever put the officer on a new post in the new city, the manager hope that all this can only be done with my old starting city, I may know what the problem is, I tried to switch to manual control but still nothing I love the game but some area is still missing as I do special forces but you can still appoint rulers only and no officers , you can't interact with this officer and freely move to another place to visit them in the three Kingdom series (PC) fully loved Romance it is difficult to hire the officer! Thank you for the hard work of making such a great game. Please facilitate the siege battle (offense or defense). From now on, the Cavalry are on the side of the useless, because both the player and the processor very rarely send large troops into field battle. I like the game. The only thing I had would be the historical events that occurred during the game, other than that thoroughly enjoy the challenging and variation game available. On top of that, if you find the game a bit challenging you can create plant characters with your powers to get this little edge you may need. ChengDu was developed by LongYou Tech.
